

Moon, Mars and Beyond

Fourth and fifth grade students in the Moon, Mars and Beyond Club traveled to the Pat-Med High School to participate in a videoconferencing session with NASA. These students, known now as mission specialists, worked at recovering a satellite lost somewhere between Mars and Pluto. Using decoding, graphing, and mathematical calculations, the navigation, cargo and transmission specialists were successful in locating the satellite, which was found near Saturn. Mission complete. Over and out.
